Intelligent ball valve

Reference standards: API 6A, API 6D, ISO10423, GB/T22513 and NACE 0175

Intelligent ball valve can be used in pipeline, petrochemical, machining and other fields. A more streamlined assembly method is adopted in the new design, fully reflecting the HP sealing techniques.

Product Features

- Two independent seals are provided on each side of the ball.
- Replaceable gate valve is equipped for long-distance pipelines.
- Automatic recovery function can be activated in case of primary seal failure.
- The primary seal also has the function of cleaning the ball and protecting the secondary seal.
- Tight sealing can can be achieved through a 90° rotation with a very small driving torque.
